

How to Parallel Park

Step 1:

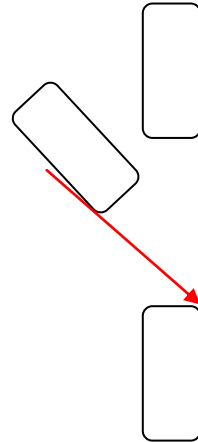

Make a straight and parallel approach, put right turn signal and line your car up with the front car. Stop when you see the tail in the corner of your second side window. Shift reverse and turn all the way to the right.

Step 2:

Look in your left side mirror, and turn into the parking space. Stop as soon as you see the complete front of the car behind you in your mirror. Turn the wheels straight (most cars is 3 halve turns). Reverse in that straight line until... (see step 3)

Step 3:

You will see the tail of the front car back in the corner of your front windshield. Stop and turn left. Watch behind you not to bump into the car.
